Justification Narrative: (Please offer ample justification; the Committee may have only this material on which to base it's recommendation. Feel free to use additional sheets.)
1) What is the purpose of this project? Why was the classification chosen?
This project would allow Pembroke to have a permanent home to house the office/equipment This is very important for the Sewer Commission to have a stable place without fear of evection or the need to move from place to place. The current lease expires Dec. 2026
What Master Plan objective(s) does this project address? How does this project contribute to this objective or help manage Town growth?
3) Additional Justification.
Department Approval (signature)  Date

Reno Nadeau / Jim Boisvert Town of Pembroke 311 Pembroke St. Pembroke, NH 03275

RE: REV 3 - Pembroke Safety Center

- Fully Adhered TPO Roof system to previously quoted 8,500 sf roof, tower roof and 2,800 sf south section roof
- Both front shingle roofs, removed and replaced
- Rear 800 sf metal roof roof replacement versus repair work

#### Dear Reno and Jim,

- ✓ As requested, this proposal includes the initially quoted 100' x 85' roof area plus the 85' x 33' section south of that roof for a TPO roof system, as well as the 20' x 15' rear upper tower roof.
- ✓ This also includes a new shingle roof replacement to both of the relatively small shingled roofs out front.
- ✓ This also provides two options for repairing versus replacing the approximately 800 sf rear metal roof

As described below, the existing failing roof was installed using partial and mechanical attachment of the roof membrane, which is not advisable for roofs with "Tectum" decking panels such as what is in place for the proposed roof areas. This type of "partial attachment" is prone to flutter during windy conditions, which puts uplift pressures for the screws to back out, which is what is happening.

The preferred method of membrane attachment is fully adhering or "gluing" the entirety of the new roof membrane down to new rigid foam ISO insulation. In a fully adhered roof system, all of the new roof insulation is mechanically attached to the Tectum decking using special fasteners that will be predetermined by special pull tests. Once the roof insulation is adequately fastened down, the TPO membrane sheets are fully adhered down. This "glue down" method eliminates the "spot stresses" placed on the individual fasteners in a mechanically attached roof system such as what is in place now.

# Master Roofers LLC

Residential & Commercial Roofing Specialists

#### Both front entryway shingle roofs

- A. Remove and replace both front shingle roofs using like kind/type shingles or GAF Timberline architectural roof shingles in any available color.
- B. Shingle replacement work to include new edging, and leak barrier membranes to all roof deck areas.

#### 2019 PRICING

#### TPO ROOF System to existing white membrane areas plus both front entry/gable roofs

Budget cost for the above specified adhered TPO roof system to the 100' x 85' roof area, plus the 20' x 15' tower roof, plus shingle replacement to both front entryway roofs is \$78,526

Add \$29,965 to include the 85' x 33' lower south roof section using the TPO Roof system as specified above.

#### Rear 800 sf metal roof system - Replacement project to include:

- 1. Remove and discard the existing metal roofing and purlins.
- 2. Install 5/8" CDX plywood sheathing.
- 3. Apply leak barrier membrane to entire roof area.
- 4. Apply aluminum drip edging.
- 5. Apply Timberline roof shingles.
- 6. Install step and endwall flashing to the sidewall and endwall details.
- 7. Install counter flashing to the sidewall and endwall details.

Budget cost of \$6,400 for the above roof replacement project using Timberline roof shingles

OR

Budget cost of \$8,000 to install a hidden fastener standing seam metal roof system

OR

### Rear 800 sf metal roof system – Repair only project to include:

• Apply suitable caulk grade sealant to the existing nail fasteners that penetrate the existing roof and to the metal counterflashing for a cost of approximately \$1,000

Pembroke Town library new Roof

Attachments:

Pembroke town library roof bid.docx

#### Hi Guys

I walked over the entire library roof and found the missing shingle areas, which I have estimated for repair in my previous email. The current roof is a high end chateau 3 tab shingle that is faded and has started to show signs of deterioration and some slight cracking. I would say that this roof should have another 3-5 years of life left before deterioration becomes a problem. With that said however if you wait the full 5yrs then the shingle will no longer qualify for the on over second layer option which is allowed per code in New Hampshire. I would definitely take advantage of the on over option within the next year or so before this option is not viable. Once the shingle start to fully curl and deteriorate then it is not possible to lay over them creating a flat surface as they have currently. The added cost of labor, time and dump fees to have this roof stripped is around \$20,000, which is not necessary if the roof is done over in the next year or so. This added cost can be saved or rather invested in the GAF ultra shingles which are 2x thicker than the standard shingles and have a much higher wind rating, but are also still less than the added \$20,000 to just rip the roof. In short the current roof should be replaced with a new GAF warrantied roofing system in the next year to save the town a bunch of money on the stripping aspect. Further the cost of a new roof in 5 yrs from now vs 1yr from now will also be much more money. It may cost an added \$35,000 to have the roof stripped and replaced new 5 yrs from now due to inflation of materials, dump fees rising every 4 months and labor costs.

Attached is the bid to replace the whole library roof on over with a GAF 30yr shingle and the added cost for an the Ultra grade shingles if decided. This option is best to be done in the next year to quarantee proper seal and flat adhesive to the lower layer.

Thank You

Kyle Jensen
